# Dual JK flip-flop

# HEF4027B flip-flops

### DESCRIPTION

The HEF4027B is a dual JK flip-flop which is edge-triggered and features independent set direct ( $S_D$ ), clear direct ( $C_D$ ), clock (CP) inputs and outputs ( $O, \bar{O}$ ). Data is accepted when CP is LOW, and transferred to the output on the positive-going edge of the clock. The active HIGH asynchronous clear-direct ( $C_D$ ) and set-direct ( $S_D$ ) are independent and override the J, K, and CP inputs. The outputs are buffered for best system performance. Schmitt-trigger action in the clock input makes the circuit highly tolerant to slower clock rise and fall times.
